

*“The price of light is less
than the cost of darkness”*

– Arthur C. Nielsen

The Global Slavery Index 2018 data aims to be a light that business can shine within their organisations and supply chains to answer these questions:

- 1 / WHERE ARE THE RISKS:**
with numbers of modern slavery on a regional and country level
- 2 / WHAT MAKES COUNTRIES VULNERABLE:**
factors that explain or predict the risk of modern slavery in each country
- 3 / HOW ARE GOVERNMENTS RESPONDING:**
the legal, policy and practical actions that governments are taking to respond to modern slavery

How your business can use this data:

We want to end modern slavery globally within our generation. To achieve this, we need every business to get on board. Every business has modern slavery in their supply chains – but only if you start looking, you will start finding.

The Global Slavery Index is a tool to help businesses identify modern slavery risk within their supply chains, including by:

- 1 / UNDERSTAND THE ISSUE:**
review country and regional studies to gain a general understanding of your business' modern slavery risks.
- 2 / MAP YOUR RISK PROFILE:**
filter prevalence data to map your risk profile for those regions or countries from which your business sources their goods and services. This data can be integrated into your internal risk assessment procedures.
- 3 / UNDERSTAND THE FRAMEWORKS:**
assess what legal frameworks and policy responses governments have put in place to respond to modern slavery within your operation or sourcing countries.

Get started...

We want the Global Slavery Index data to be used by every business globally to understand their risks and take action.
